

NAME

curl_free - reclaim memory that has been obtained through a libcurl call

SYNOPSIS

```
#include <curl/curl.h>
```

```
void curl_free( char *ptr );
```

DESCRIPTION

curl_free reclaims memory that has been obtained through a libcurl call. Use curl_free() instead of free() to avoid anomalies that can result from differences in memory management between your application and libcurl.

SEE ALSO

curl_unescape()
